

Venoplant®

sachet

VENOPLANT sachets is a food supplement that contains micronized Diosmin, dry titrated extracts of Melilot that favor the venous function and the hemorrhoidal plexus and the drainage of body fluids, and dry titrated extracts of Asiatic Centella that favor the physiological function of the microcirculation and contrasts the imperfections of cellulite and helps to fighting the sense of legs heaviness. VENOPLANT sachets also contains Vitamin C which contributes to the normal formation of collagen for the physiological function of blood vessels, it also contributes to the normal formation of collagen for the skin, to the protection of cells from oxidative stress and to the reduction of tiredness and fatigue. Vitamin C also contributes to the normal function of the immune system.

Active ingredients of **VENOPLANT sachets**:

- **MELILOT**

The flowered summits of this plant are used. They contain COUMARIN whose properties made it always interesting from medical and scientific perspective.

Melilot promotes blood circulation, functionality of hemorrhoidal plexus, microcirculation and drainage of body fluids.

- **ASIATIC CENTELLA**

Asiatic Centella is a plant for long time known and used. It is rich in triterpenoids, substances active on venous circulation.

The triterpenoid fraction consists of substances involved in the control of microcirculation thus participating in the physiological function of tissue fluids drainage, whose stagnation causes cellulite, swelling and heaviness in lower limbs.

- **MICRONIZED DIOSMIN**

Naturally occurring bioflavonoid extracted from lemon tree, orange and other citrines fruits.

- **VITAMIN C**

Vitamin C has numerous properties that are important for the well-being of the body:

- contributes to the protection of cells from oxidative stress, allowing to fight free radicals that contribute to the aging process;
- contributes to the normal formation of collagen, a protein essential for the formation of bones, connective tissue, skin, blood vessels, gums and teeth;
- contributes to normal energy metabolism and to the reduction of tiredness and fatigue;
- contributes to the normal function of the immune system.
