

# Venoplant<sup>®</sup> Patch

## Transdermal patches

**Venoplant Patch** is a transdermal patch containing vegetable extracts of Horse Chestnut (aescin), Melilotus (coumarin) and Centella (triterpenes). Thanks to its special production technology, the patch gradually releases its active substances, which, in combination, are also a source of relief for tired, heavy legs. Since it also aids the drainage of tissue fluids and a physiological improvement of capillary tone, it helps to fight cellulite beauty problems and skin blemishes.

**Venoplant Patch** helps and supports normal microcirculation function.

The **Venoplant Patch** active substances:

- **HORSE CHESTNUT.** The main functional extract of Horse Chestnuts is **aescin**, with toning and astringent properties, which attenuate sensations such as swelling, fatigue and heaviness of the legs. Multiple experimental models have proven its ability to reduce the permeability of the capillaries, thus reducing the quantities of fluids in the tissues surrounding the small blood vessels <sup>(1)</sup>.
- **MELILOTUS.** The flowering tips of the Melilotus plant contain **coumarin**, a substance with a toning and astringent action which is totally absorbed by the skin, since it is extremely lipophilic. Melilotus is considered a medicinal plant, able to improve tissue oxygenation through its ability to stimulate the microcirculation.
- **CENTELLA ASIATICA.** A medicinal plant which has been known and used for a very long time. The **triterpene-rich** extract obtained from the leaves is particularly indicated as a cosmetic aid to reactivation of the microcirculation, which helps to ensure the normal drainage of tissue fluids, the retention of which causes swelling and a feeling of heaviness in the legs.

**Venoplant Patch** also contains the **GLYCACID ECO** biotechnological derivate, a glycosaminoglycan consisting of hyaluronic acid precursors. Thanks to its mucopolysaccharide chains, it can bond with the water in the epidermis to moisturise and soften the skin, and it helps to improve intradermal penetration, acting as a raw material for the physiological formation of hyaluronic acid, which retains water in the fundamental layer of the dermis and in the connective tissue.

**INSTRUCTIONS FOR USE:** cleanse and dry the zone for treatment. Open the sachet; every strip contains two patches stuck together, which must be used separately. Separate the two patches so that they both still adhere to the two flaps of paper. Gently remove the backing paper of one patch starting from the centre of the strip, and apply the patch with care, ensuring that it adheres firmly to the skin. Conserve the second patch by sealing the sachet carefully using the

fastener. Apply the patch once a day for 8-12 hours. Do not apply more than one patch at a time.

**SAFETY WARNINGS:** Single-use product for external use, for adults only. Do not swallow. Only apply to undamaged skin and stop treatment in case of irritation or hypersensitivity. Do not use in case of known allergy to one of the ingredients. Keep out of reach of children. Store in a cool, dry place at a temperature below 30°C, protected from direct light and heat sources.

**PACK:** 10 patches in minigrip pack

<sup>(1)</sup> Aescin, Review from Interactive Medicine<sup>®</sup> - 2001

One strip = 2 patches
