

VENOPLANT Procto gel

Venoplant Procto gel contains Escin, Heparin, Asiatic Centella, Melilotus and Zanthalene®, components with proven protective and soothing action.

It is particularly useful for the treatment of symptoms, of discomfort and irritation of the perianal area (hemorrhoids) giving a pleasant feeling of relief, thanks to the synergistic action of its components. Its weakly acidic pH formulation respects the environment of the areas to be treated.

Venoplant Procto gel contains as emulsifier a lipoprotein vegetable compound that is patented: OLIVOIL GLUTINATE.

This substance, derived from olive oil and from wheat proteins, confers on the gel cream excellent skin tolerability and effective absorption of the components.

Instructions for use

Thoroughly clean the affected area before applying the product. Spread the cream to the affected area from three to four times a day.

Warnings and advice

For external use only.

Keep out of eyes and apply only on undamaged skin.

Do not use this product if the container is, when first opened, damaged or not properly closed.

Do not use the product in case of damage/ injuries or recognized intolerance towards any of the components.

After use do not dispose of the containers in the environment.

Keep out of reach of children.

The manufacturer declines all responsibility in case of improper use and other than that indicated on the package insert and labeling of the medical device.

The main components of **Venoplant Procto gel** are:

- **ESCIN**

It is the main component of horse chestnut, a seed that has proved, in many experimental models, to possess properties that can reduce the symptoms of venous disorders as swollen legs, heaviness, pain and itching.

- **ZANTHALENE®**

Extracted from the fruits of *Zanthoxylum alatum*, it relieves irritation giving relief and a pleasant soothing effect.

- **TRITERPENIC FRACTION OF CENTELLA EXTRACT**

The Asiatic centella is a plant known for a long time and used for therapeutic purposes.

It is rich in triterpenoid substances that act on the skin tissue and venous circulation.

The triterpene fraction comprises Asiatic acid (30%), Madecassic acid (30%) and Asiaticoside (40%), which stimulate the trophism of the connective tissue and improve the permeability of microcirculation. They help

the physiological function of drainage of tissue fluids whose stagnation cause cellulite, swelling and heaviness of the lower limbs.

- **MELILOTUS**

The aerial parts of the plant are used: leaves and fresh or dried inflorescence. They contain coumarin which helps to reduce edema from venous insufficiency.

- **HEPARIN**

It is a mucopolysaccharide and its cutaneous use can help to reduce the formation of hematoma and exudates due to trauma or venous circulatory disorders.

Venoplant Procto gel package is available in a tube of 30 g with applicator.

Venoplant® line

www.venoplant.it

Venoplant Enterosoma-I® **Gastro-protected tablets**

A nutritional supplement containing micronised Diosmin and titrated dry extracts of Melilotus, which aid vein circulation and rectal venous plexus function, and titrated dry extract of Centella Asiatica, which favours the normal functioning of the microcirculation and fights cellulite skin beauty problems.
